WATER WISELY!

PROPER IRRIGATION CONSERVES OUR PRECIOUS WATER RESOURCES!

Plants don't waste water, People do!

"The type of plant materials or irrigation system in the landscape has much less effect on water consumption than the human factor of good landscape irrigation water management." Dr. Welsh, past President of the National Xeriscape Council.

Use "Smart Controllers"

Smart controllers use weather information and sensors to efficiently manage frequency of watering times. Smart Controllers can reduce your outdoor water use by up to 30 percent. Possible rebates for an upgrade may be available through your local government. For more information, log on to www.aquaconserve.com.

Proper Irrigation Maintenance

With the change of each season, visually inspect your irrigation system. Replace malfunctioning sprinklers or leaky connections. If distribution uniformity is low, check with a landscape contractor or your local garden center for tips on how to increase uniformity.

A-G SOD PREMIUM TURFGRASS GUIDE

ElitePlus

Elite Plus: Our most popular cool-season turfgrass is a blend of improved fescue and bluegrass which has year-round dark green color. The "Plus" is that it will gradually repair minor damage over time without the need for reseeding. It has a medium leaf blade, disease resistance, partial shade tolerance and a deep root system for drought tolerance. It is easy to care for and adapts well to the varied climates and soils of the West.

Tifgreen

Tifgreen: A fine-textured hybrid Bermuda which creates a carpet-like appearance and tolerates close mowing heights. This water conservative grass becomes dormant in the winter and may develop some thatch. Available overseeded with perennial ryegrass for winter installation jobs.

Tifway

Tifway: A versatile hybrid Bermuda which tolerates close mowing and is disease resistant. It spreads rapidly to provide a dense turf which is wear tolerant and heals quickly. This water conservative grass becomes dormant in the winter and may develop some thatch. Available overseeded with perennial ryegrass for winter installation jobs.

A-G 1 BERMUDA

A-G 1 Bermuda: A hybrid Bermudagrass with a natural dark green color and medium leaf texture. It has an aggressive growth habit for quick recovery from high traffic and can be mowed with either a rotary or reel mower. This turfgrass is water conservative and becomes dormant in winter yet exhibits early spring green-up. May develop some thatch. Available overseeded with perennial ryegrass for winter installation jobs.
