

Southern California NATURAL GRASS GUIDE

A-G Sod Farms offers the following premium turfgrass varieties across Southern California.

TifTuf™

Known for its drought tolerance and superior winter color over other Hybrid Bermuda grasses, TifTuf™ is fine-textured, dense and recovers quickly from wear and tear. TifTuf™ is the latest, most improved variety released from Tifton, Georgia's renowned turfgrass program. TifTuf™ will experience some cold weather dormancy and is available overseeded with perennial ryegrass during winter.

NorthBridge® BERMUDAGRASS

This fine-textured Bermuda grass demonstrates excellent color, disease resistance, aggressive rooting and rapid recovery. Bred for cold tolerance, NorthBridge has a shorter dormancy period than many Bermuda grass varieties. It's a proven winner on golf courses and sports fields. Also, well-suited to commercial and residential landscapes.

Tifway 419™

A versatile hybrid Bermuda which tolerates close mowing and is disease resistant. It spreads rapidly to provide a dense turf which is wear tolerant and heals quickly. This water conservative grass becomes dormant in the winter and may develop some thatch. Available overseeded with perennial ryegrass for winter installation jobs.

Ball Park

This versatile blend of turfgrass species will adapt to a variety of uses and maintenance regimens. We start with a healthy stand of warm-season Hybrid Bermuda and overseed with a blend of cool-season Ryegrass and Kentucky Bluegrass. The Hybrid Bermuda tolerates heavy traffic and high temperatures. The Ryegrass and Kentucky Bluegrass tolerate shade and offer winter color. All three varieties in our Ballpark Mix have a fine leaf texture.

ElitePlus™

Our most popular cool-season turfgrass is a blend of improved fescue and bluegrass which has year-round dark green color. The "Plus" is that it will gradually repair minor damage overtime without the need for reseeding. It has a medium leaf blade, disease resistance, partial shade tolerance and a deep root system for drought tolerance. It is easy to care for and adapts well to the varied climates and soils of the West.

St. Augustine

A warm season grass which offers a medium green color with a coarse, thick-stemmed leaf and texture and a creeping growth habit via stolons. Robust, fast-growing, establishes rapidly. Shade tolerant and may go dormant in the winter
