

Premium NATURAL GRASS

LOBO[®] ZOYSIAGRASS

This medium-fine texture zoysiagrass demonstrates superior turf quality, high density that outcompetes weeds, low seedhead production and good recoverability. Bred for low inputs, Lobo can retain good color during drought and cold, and it has demonstrated that it can persist well under an array of climates (including warm-temperate, warm-humid and hot-arid) as well as under a range of uses, from low-management situations such as golf course roughs or roadsides to higher-end uses like lawns and golf course fairways.

MAINTENANCE GUIDE

WATERING

Superior drought tolerance compared to Zeon and Palisades. Maintains high levels of turf quality under drought and recovers quickly once re-watered.

FERTILIZATION

Retains color extremely well under low input conditions. Therefore, it requires lower fertilization compared to bermudagrass.

MOWING

Requires less mowing than bermudagrass.

DISEASES

Resistant to large patch and Helminthosporium leaf spot.

WEEDS AND INSECTS

Very high density that outcompetes weeds well.

DETHATCHING

Dethatch at least once every two years.

TECHNICAL DATA

Common Name:	LOBO Zoysiagrass
Species:	Zoysia japonica x Zoysia matrella hybrid
Growth Rate:	Summer 1/4 to 1/2 inches per week Winter 0 to 1/4 inches per week
Root Depth:	3 to 6 feet, depending upon soil type and watering patterns.
ADAPTABILITY	
Soils Range:	Wide range from sandy saline to clay soils.
Temp. Tolerance:	Wide range from -10°F to 110°F
ET₀:	.5 minimum, .7 preferred
pH Range:	5.8 to 7.0, 6.0-6.5 optimum
Shade Tolerance:	Prefers full sun, but tolerates 60% shade.
Geographic Range:	USDA plant hardiness zones 6a to 10b

STANDARDS AND MEASURES

Size:	8 sq. ft. per piece 480 sq. ft. per pallet Big Rolls: 200 to 500 sq. ft. Soil Thickness 1/2 inch ± 1/8 inch, plus top growth
Weight:	2500 to 3000 lbs. per pallet
Other:	100% Weed Free Sod
